

PQR is a right-angled triangle.

$PR = 8 \text{ cm}$.

$QR = 12 \text{ cm}$.

Find the size of the angle marked x . Give your answer correct to 1 decimal place.

$$\tan x = \frac{8}{12}$$

$$x = \tan^{-1} \frac{8}{12}$$

$$= 33.69006753$$

$$= \underline{33.7^\circ}$$

(3)

ABC is a right-angled triangle.

$$AB = 20 \text{ cm.}$$

$$AC = 13.8 \text{ cm.}$$

Find the size of the angle ABC . Give your answer correct to 3 significant figures.

S O
H A
C H T A

$$\sin x = \frac{13.8}{20}$$

$$x = \sin^{-1} \frac{13.8}{20}$$

$$= 43.63010887$$

$$= \underline{\underline{43.6^\circ}}$$

(3)

A 6 metre ladder is used to clean windows. It must stand 1.5 metres from the base of a wall on horizontal ground. In order for the window cleaner to be able to safely use the ladder, the angle between the ground and the ladder cannot exceed 75° .

Is the ladder safe to use?

so the ladder is not safe to use .
